

Croft Engineering Services rise to the challenge ...and shine

WHEN a leading food manufacturer needed help – Croft Engineering Services were ready and able to take up the challenge! An urgent request was received by Croft Engineering Services staff asking for two specialist filters for use at the food manufacturing plant. The filters needed to be made to order quickly to avoid costly down time at the factory, in March 2011. The request came via Eastern Power and Motion, a company that works closely with the manufacturer in the supply of mechanical and fluid power components. Eastern Power and Motion's Rob Spencer said: "We needed the filters made quickly but had a very specific design brief. "Croft Engineering Services were great to work with and were able to provide a high quality product within a very tight turnaround." Croft Partner Neil Burns explained: "This is the sort of work we enjoy and excel at – we have a highly-experienced team who are capable of creating bespoke filters, but the flexibility to react fast in a high pressure situation." "The filters were made within just 24 hours and dispatched the next day – ensuring downtime and repair costs were kept to a minimum at the site." The filters, in stainless 316 Perforated plate, included a perforated sleeve within another perforated sleeve – with a mesh lining sandwiched in between. Once created, they were immediately fitted – avoiding long and potentially costly delays at the plant.
